

Pandas Profiling

Description

- Pandas profiling which is now referred to as `ydata_profiling` is a framework that allows you to develop an interactive HTML dashboard that covers all the insights from your pandas DataFrames.

Insights

1. Missing Value Analysis
2. Descriptive Statistics
3. Correlations between Columns
4. Text Column Insights
 - Character Count
 - Word Count
 - Frequency Analysis
5. Memory Consumption
6. Alerts
 - High Cardinality
 - Presence of Zeros
 - Highly Correlated

Setup and Installation

1. Install `ydata_profiling` via `pip`

```
pip install ydata-profiling
```

Basic Usage

1. Generate a Profile Report.

```
import pandas as pd
from ydata_profiling import ProfileReport

# Create a DataFrame
frame_dict = {
    'col_1': list(range(10)),
    'col_2': list(range(10, 20))
}

df = pd.DataFrame.from_dict(frame_dict)

# Generate a report
report = ProfileReport(df=df)
```

2. Export the report to a HTML file.

- ... is a continuation from the previous example.

...

```
# to_file() method to export the report into a HTML file
report.to_file('report.html')
```
